

Surgical Facility Renovation VAMC – Salt Lake City, UT

Planning consultation and master plan services were provided for a major Surgical Suite Upgrade and Renovation. Alternatives were presented and benefit/cost analysis was conducted to aid decision-making. A comprehensive White Paper on Trends in Surgical practice impacting facilities was provided.

The selected alternative plan includes the replacement of the SICU in a renovated patient wing. The vacated SICU area provides ample space for new ambulatory holding recovery areas, a new PACU and a phased development plan for improving the 6 OR surgical suite. Detail design requirements drawings were provided in support of the Architect-of-Record for the first phase, SICU and PACU projects.
