

Facility Planning Services

Arnot Ogden Medical Center, Elmira, NY

TM Osborn has provided Master Planning and Facility Planning Consultation services to this 300 bed Regional Medical Center, since 1984. In that 20+ years, the Medical Center has continued to advance and expand with an eye to the future.

The 40+ acre campus has been achieved by a combination of aggressive land acquisition and strategic preservation strategies. Projects have regenerated and improved nearly all aspects of the medical facilities including, Surgery, Intensive Care, Ambulatory Surgery, Laboratory, Heart Center, Women's Center, and Emergency services. A Dialysis Center and Outpatient Therapy Center are also added.

In this project, TM Osborn Associates assisted in the planning for a patient tower addition, which will replace the Center's older patient accommodations. The plan currently under review and refinement will provide a 160 bed all private room addition to replace substandard patient rooms.

Integrally associated expansion is being preserved for extensive future diagnostic/treatment facilities. Close-in and interconnected parking structures will assist patients and staff alike to comfortably reach their destinations in the inclement Winter weather. The plan looks ahead 20 years into the future, in order to preserve options and insure unimpeded growth when it will be necessary.
