

Therapy Center Addition VA Loch Raven CLC, Baltimore, MD

TM Osborn, as Consultant to EBA, Ernest Bland Associates, provided the programming, schematic design and healthcare architectural detail design consultation for this 23,500 sf project. The project expands the space available for rehabilitation therapy services while freeing up area in the existing CLC for improvements supporting a resident-centered environment. A new dedicated outpatient entrance serves ambulatory rehabilitation patients.

The program concept developed in participative sessions with the staff emphasized integrated Physical Therapy, Kinesiotherapy, Occupational Therapy and Recreation Therapy treatment resources. The combination of open plan exercise areas and fully enclosed private treatment rooms contributes to the design's resident-centered focus. These attributes and the sunlight-flooded common concourse earned high praise from Planetree, Inc., reviewer of the project's resident-centered environment.
